KEY CLIENTS

EDC Consulting has supported over 100 independent client engagements and has been awarded more than 20 prime contracts, including contracts throughout the Department of Defense, Civilian Federal agencies, Non-Governmental Organizations and the private sector. Our clients include:

BUSINESS SYSTEMS

EDC has extensive experience designing, developing, implementing and maintaining business systems and software solutions. EDC Consulting offers end-to-end implementation and post implementation support services for SAP, Oracle, PeopleSoft and Maximo business systems to name just a few. We are experts at ensuring that these business systems meet our clients' needs of today and tomorrow. EDC Consulting has formal partnerships in place with companies like SAP, Oracle, IBM and many other independent software and hardware vendors and services providers. Over the years we have fine-tuned our implementation methodologies to meet the needs of different industries and businesses. Our team of consultants includes subject matter experts with significant business experience coupled with many years of implementation expertise in specific industries to help our clients realize true business value and a return on their investment.

EDC Consulting has a strong track record of supporting the warfighter by implementing and integrating complex SAP functional and technical solutions for a wide range of Defense clients to include the U.S. Army, U.S. Navy, Defense Logistics Agency (DLA) and Office of the Secretary of Defense (OSD).

EDC has a strong track record of success implementing PeopleSoft business systems. We recently integrated, implemented, and deployed PeopleSoft's best-of-class software for financial management, human resources and business intelligence in an accelerated model to over 1.2 million individual users in the U.S. Army.

EDC Consulting helps its clients achieve high performance by delivering Oracle services through an unmatched combination of industry expertise and implementation know-how that brings depth, completeness and value to our services. EDC has provided Oracle services to the U.S. Marine Corps, DLA, U.S. Army, OSD, and many other clients in the Federal government.

Our in-depth experience in Maximo is rooted in our extensive background designing, integrating and maintaining enterprise business system solutions throughout the public and private sector. We are subject matter experts at implementing and integrating Maximo Enterprise Asset Management solutions in SAP, Oracle, PeopleSoft, legacy and stand-alone environments.

TECHNOLOGY

The Department of Defense and Federal government agencies are the world's largest consumers of information technology. They face enormously complex and expensive investment decisions that have a direct impact on their ability to carry out their mission. At EDC, we help government organizations make the right decisions in technology to control costs and further agency objectives. We apply structure to an often unstructured process of technology implementations. We have expertise in the entire lifecycle of information systems and the technologies that support them, and we work side by side with decision-makers to prioritize their needs, assess their alternatives, and develop the right IT infrastructures to address their needs. We also recognize that a successful IT strategy requires that the data stored in those systems can help decision-makers solve critical business problems. We are skilled in multiple data management and analytics approaches and help government organizations harness the power of their data by framing questions, applying appropriate computational methods, and communicating results. Our deep understanding of leading-edge technologies, data and organization-specific business processes combine for an invaluable 360-degree perspective on applying IT to achieve mission objectives.

Agile Development

EDC Consulting uses a rapid, adaptable, scalable and successful agile development methodology that is designed to meet today's challenges. Our ability to support agile concepts entails quickly sensing and effectively responding to ever-evolving conditions. Demonstrable business results (working software, etc.) are delivered regularly by timing development into a predictable cadence of iterations (typically one to four weeks).

Systems Architecture & Design

When addressing a system's technical framework relative to a client's requirements and specifications, EDC employs a set of conventions, rules, and standards in designing or integrating the various hardware, software, and network components. EDC will then develop an overall implementation solution plan, then technically lead implementation installation, customization, and integration efforts.

Systems Development

EDC achieves secure software delivery using an agile development framework. EDC provides trusted and experienced leadership, skilled developers, and proven approaches to ensure the success of our clients' software development initiatives. EDC uses proven techniques and software, middleware and cloud-based development services using agile scrum, lean, Kanban and traditional software development life-cycle approaches.

Technology Transformation & Modernization

EDC provides Technology Transformation & Modernization in the conversion, rewriting or porting of a legacy system to a modern computer programming language, software libraries, protocols, or hardware platform. Our experienced team of System Integrators provide automated legacy system modernization services for government clients.
